Subject: Outdated EFCEM Draft Standard for Boiling Pans/Kettles

To Whom It May Concern,

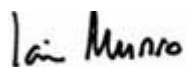

After reviewing the documents with our Technical Specialists, I can confirm that the draft standard for Boiling Pans/Kettles was originally developed by the EFCEM Technical Committee around 2008. However, it never progressed beyond draft status. Given the significant advancements in product development and component technologies since then, this standard is now outdated and unsuitable for procurement purposes.

EFCEM does not endorse or support the use of this draft standard as a benchmark for energy performance in competitive tenders or purchasing requirements.

The EFCEM Kettle Standard (draft) and other product-specific standards were initially created in anticipation of future EU regulations, with the aim of establishing a unified efficiency benchmark for potential EU adoption. However, none of these standards were finalized or approved.

If you require any further information or clarification regarding EFCEM product standards, please contact the Secretary General at **sec.gen@efcem2024.onmicrosoft.com**.

Yours sincerely,

Iain Munro
Secretary General
